**EXAMINER COMMENT**

***Response to Arguments***

1. Applicant's amendments and accompanying arguments filed 9/7/2010, with respect to the rejection of claims 1-5 and 7-11 under 35 U.S.C. §103 have been fully considered and are persuasive. Accordingly, that rejection has been withdrawn.

The Examiner would like to note that the limitation "said local information being an actual real value to identify said Appliance", newly added to the preamble of claims 1 and 7, has been given patentable weight, despite its placement in the preamble. The Examiner believes that the body of the claim depends upon the preamble for completeness, since the preamble expressly limits the "local information" references in the body of the claim to be "an actual real value to identify said Appliance" and has been argued by Applicant as distinguishing the claim from the prior art of record (Remarks 5).

Accordingly, the newly added limitation is deemed essential to patentability, and has been relied upon by the Examiner in distinguishing the present claims from the prior art of record.

***Allowable Subject Matter***

2. Claims 1-5 and 7-11 (now renumbered 1-10) are allowed.
3. The following is an examiner's statement of reasons for allowance. These reasons for allowance should not be interpreted to imply that limitations not specifically

mentioned are immaterial to patentability. The specific limitations identified below have been considered in combination with the entirety of the claim in determining patentability.

The prior art or record fails to disclose or suggest a method/apparatus as claimed, wherein an Internet Appliance receives a request message addressed to a destination server and containing a substitutable variable name, and wherein the Internet Appliance detects and replaces the substitutable variable name with previously stored information consisting of an "actual real value to identify said Appliance", prior to sending the amended message to the destination server.

The prior art teaches many similar systems, including an appliance that substitutes an address of a destination computer in place of a variable (US 6,981,146; col. 5, ll. 17-33), a monitoring server that replaces a substitutable variable with the identity of a monitored computer US 2003/0120775; ¶34), a proxy server that replaces a substitutable variable in a URL template with an identifier received from an internet appliance (US 6,865,608; col. 3, l. 66 to col. 4, l. 2; col. 7, ll. 49-55), and a client computer that replaces a plurality of variables in a request with information about a user of client (US 6,542,933; col. 3, ll. 5-60). Marks (US 2004/0193676) teaches an internet appliance replacing a variable in a request with a real value to identify the appliance (¶47-48). However, Marks has a U.S. filing date after the foreign priority date of the present application and is not available as prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
